

ABSTRACT OF THE DISCLOSURE

A post puller system for efficiently removing posts from a ground surface. The post puller system includes a frame attachable to a loader of a tractor, an extended structure extending from the frame, a first jaw pivotally attached to the extended structure, an actuator unit attached between the frame and the first jaw, and a second jaw and a third jaw attached to the extended portion. A post is positioned between the jaws and the actuator unit closes the first jaw with respect to the second jaw and the third jaw until catchably engaged. The user then lifts the post from the ground surface.
